DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over ***Paravia*** et al (6,508,710) in view of ***Seheidt*** et al (5,787,173).

Regarding claim 1, Paravia teaches a gambling system employing a location verifier system for verifying that a user is located within a predefined geographical area, after which the user is allowed to place a wager on a sports book, the system comprising a transmitting system having one or more transmitters; a control system for receiving a signal requesting remote access to a betting system and the transmitting of an authorization number {a password- #1142, Fig. 13} (abstract; Fig. 14 and Fig. 15). While Paravia teaches the use of various techniques for granting the user access to the sports wagering game (col. 2, lines 11-12), Paravia is silent regarding the feature of receiving and transmitting a verification number to and from the user in order to allow play. As indicated in the initial office action, this feature is known in cryptographic verification systems as a handshaking process. In an analogous system of verification of user identity, Seheidt teaches a handshaking system in which there is transmission and reception of verification information {cryptographic key data} from a remote site to a user and back from a user (abstract; Fig. 1). It would have been obvious to a person of

ordinary skill in the art at the time of the invention to enhance the verification/authorization system of Paravia, by sending and receiving the password verification number of Paravia in a handshaking manner, as disclosed by Seheidt, in order to make gaming more secure.

Claims 2-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over **Paravia** et al (6,508,710) in view of **Seheidt** et al (5,787,173), further in view of **Wicks** or **LaDue** (5,999,808).

Regarding claims 2-17, Paravia and Seheidt teach all the limitations of the claims as disclosed above. The references lack an explicit disclosure of a pager for wagering, in an analogous wagering system, Wicks or LaDue teach the use of a pager for placing wagers (Wicks- abstract; Fig. 2; LaDue- abstract; Fig. 9). It would have been obvious to a person of ordinary skill in the art to enhance Paravia and Seheidt by utilizing a pager for the wagering device, in order to make the system easier to play from various locations and easier to transport.

Pertinent Prior Art

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Martin and Alcorn et al teach location verification systems for gaming.

Examiner's Response to Applicant's Remarks

Applicant's arguments with respect to claims 1-17 have been considered but are moot in view of the new ground(s) of rejection. The examiner has updated the search and cited new art in the above rejections, which the examiner considers to be more

Art Unit: 3714

relevant to the instant claim limitations. Since the new art was not cited due to an amendment of the claims, the rejection has been made non-final.
